GLOVE SIZE CHART

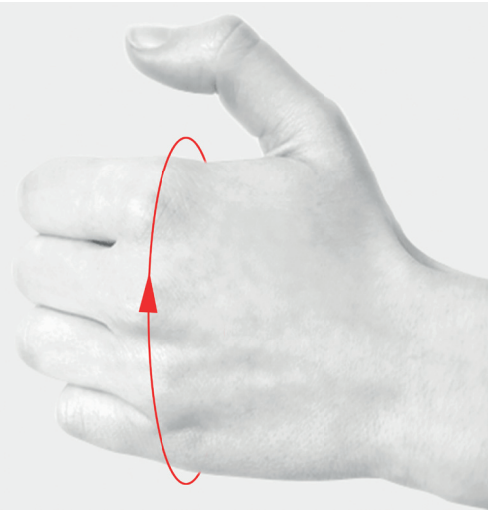

How to measure your glove size:

Open your hand and put a tape measure around the knuckles (without thumb), now clench your hand into a fist and measure.

Adults:

European glove sizes for adults are measured in old inches (French: pouce). One inch is equal to 2.7 cm.
Size 8 therefore corresponds to 8 inches = 21.6 cm.

	WOMEN					MEN						
Hand circumference in cm	16,2	17,6	18,9	20,3	21,6	23,0	24,3	25,7	27,0	28,4	29,7	31,0	32,4
Glove size	6	6,5	7	7,5	8	8,5	9	9,5	10	10,5	11	11,5	12

Kids:

Kids develop very differently in their growth, therefore our size recommendation can only provide a rough guide. It is best if the child tries on the gloves.

	KIDS						
Hand circumference in cm	12	13	14	15	16	17	19
Glove size	1	2	3	4	5	6	7

The sizes given are only guidelines, as gloves are constructed differently according to their function:

- Cycling and cross-country skiing gloves are usually made of elastic materials and are comparatively tight-fitting, as the full transfer of power from the hand to the handlebar or pole grip is desired.
- Ski gloves must protect against the cold and therefore have material combinations that trap insulating air. If your measured value is between 2 sizes, choose the larger one. This ensures that there is enough air in the gloves and no cold bridge can arise.
- Riding gloves should fit like a second skin, because the reins require fingertip feeling.
